

AMENDMENTS TO THE SUBSTITUTE SPECIFICATION

Please amend the paragraph on page 8, line 21, to line 31, as follows:

The glazing profile comprises at its simplest a bed portion 13 and a raised portion, which in this embodiment is in the form of a curled lip 12. Preferably there is also a spacer portion 14 on the peripheral side of the raised portion, i.e. on the side towards the periphery of the glazing. During insertion of the glazing, the spacer portion 14 will come to abut onto face 18 of the parallel ~~over may be utilised for an auxiliary component, for~~ portion 6 of the mounting flange 5, thereby acting as a stop for the glazing and maintaining it in fixed spaced relationship to the mounting flange.
